CP700 Series AC Drive

For Air Compressors User Guide

Industrial Automation | Intelligent Elevator | New Energy Vehicle | Industrial Robot | Rail Transit

Data code 19010796 A05

Preface

Thank you for purchasing the CP700 series AC drive for air compressors developed and manufactured by Inovance.

The CP700 series AC drive for air compressors has the following features:

- Easy mounting: The sheet metal structure is adopted with wall-mounting supported.
- Simplified wiring and commissioning: The control circuit terminal uses plug-in connector terminals with error proofing design.
- High integration: The AC drive is equipped with built-in 220 VAC power supply, a mains frequency contactor, and built-in detection and protection circuits such as PT100 and PTC and provides 24 V external output. The AC drive uses dedicated software to communicate with HMI and Internet of Things (IoT) equipment without commissioning, which supports one-button startup.

This user guide describes the correct use of the CP700 series AC drive for air compressors, including selection, mounting, wiring, and commissioning. Read and understand the user guide before use and forward the user guide to end users.

About the User Guide

Read and understand the user guide before use. Contact our technical support personnel if you have any question during the use.

Standards Compliance

The following table lists the certifications and standards that the product may comply with. For details about the acquired certifications, see the certification marks on the product nameplate.

Name	Directive Name		Standard
CE certification	EMC Directive	2014/30/EU	EN 61800-3
	LVD Directive	2014/35/EU	EN 61800-5-1
	RoHS Directive	2011/65/EU	EN 50581
TUV certification	-		EN 61800-5-1
UL certification			UL508C/UL61800-5-1 C22.2 No.14-13

Revision History

Date	Version	Revision Description
November 2018	A00	First release.
April 2019	A01	◆ Updated Inovance's logo. ◆ Updated the certification description in Preface.
July 2019	A02	◆ Added data of the 90 kW models in the following sections: 1.1 Nameplate and Model Number 1.3 Technical Data 1.4 Overall Dimensions 2.4.1 Main Power Cables 5.3.2 Number of Cooling Fans ◆ Updated data of F9-17 to F9-45 in "A.1 Standard Parameter Table". ◆ Added group A4 parameters and A8-80 to A8-86 in "A.1 Standard Parameter Table". ◆ Added U0-76 and U0-87 to U0-95 in "A.2 Monitoring Parameters". ◆ Modified data of U0-77.
August 2020	A03	◆ Updated description of solutions for Err14, Err17, and Err71. ◆ Deleted description of F1-26, F6-23, Fd-93, Fd-97, and Fd-98. ◆ Updted "1.4 Overall Dimensions."
April 2021	A04	◆ Deleted the silkscreen on the panel.
January 2022	A05	◆ Updated the description of DB9

Acquisition

This user guide is shipped with the product. You can contact your sales representative for any question or query.

To obtain the electronic version of the user guide, log in to Inovance's website (http://www.inovance.com), click "Download", search the user guide name, and then download the PDF.

Contents

Safety Instructions

Safety Precautions

1) Before installing, using, and maintaining this equipment, read the safety information and precautions thoroughly, and comply with them during operations.
2) To ensure the safety of humans and equipment, follow the signs on the equipment and all the safety instructions in this user guide.
3) "CAUTION", "WARNING", and "DANGER" items in the user guide do not indicate all safety precautions that need to be followed; instead, they just supplement the safety precautions.
4) Use this equipment according to the designated environment requirements. Damage caused by improper usage is not covered by warranty.
5) Inovance shall take no responsibility for any personal injuries or property damage caused by improper usage.

Safety Levels and Definitions

indicates that failure to comply with the notice will result in severe personal injuries or even death.

indicates that failure to comply with the notice may result in severe personal injuries or even death.

indicates that failure to comply with the notice may result in minor personal injuries or damage to the equipment.

Safety Instructions

Unpacking
   ◆ Check whether the packing is intact and whether there is damage, water seepage, damp, and deformation. ◆ Unpack the package by following the package sequence. Do not hit the package with force. ◆ Check whether there are damage, rust, or injuries on the surface of the equipment or equipment accessories. ◆ Check whether the number of packing materials is consistent with the packing list.

- Do not install the equipment if you find damage, rust, or indications of use on the equipment or accessories.
- Do not install the equipment if you find water seepage, component missing or damage upon unpacking.
- Do not install the equipment if you find the packing list does not conform to the equipment you received.

Storage and Transportation

- Store and transport this equipment based on the storage and transportation requirements for humidity and temperature.
- Avoid transporting the equipment in environments such as water splashing, rain, direct sunlight, strong electric field, strong magnetic field, and strong vibration.
- Avoid storing this equipment for more than three months. Long-term storage requires stricter protection and necessary inspections.
- Pack the equipment strictly before transportation. Use a sealed box for long-distance transportation.
- Never transport this equipment with other equipment or materials that may harm or have negative impacts on this equipment.

- Use professional loading and unloading equipment to carry large-scale or heavy equipment.
- When carrying this equipment with bare hands, hold the equipment casing firmly with care to prevent parts falling. Failure to comply may result in personal injuries.
- Handle the equipment with care during transportation and mind your step to prevent personal injuries or equipment damage.
- Never stand or stay below the equipment when the equipment is lifted by hoisting equipment.

Installation

- Thoroughly read the safety instructions and user guide before installation.
- Do not modify this equipment.
- Do not loosen fixed bolts (especially those marked in red) on equipment components.
- Do not install this equipment in places with strong electric or magnetic fields.
- When this equipment is installed in a cabinet or final equipment, protection measures such as a fireproof enclosure, electrical enclosure, or mechanical enclosure must be provided. The IP rating must meet IEC standards and local laws and regulations.

- Equipment installation, wiring, maintenance, inspection, or parts replacement must be performed only by professionals.
- Installation, wiring, maintenance, inspection, or parts replacement must be performed only by experienced personnel who have been trained with necessary electrical information.
- Installation personnel must be familiar with equipment installation requirements and relevant technical materials.
- Before installing equipment with strong electromagnetic interference, such as a transformer, install an electromagnetic shielding device for this equipment to prevent malfunctions.

Wiring

- Equipment installation, wiring, maintenance, inspection, or parts replacement must be performed only by professionals.
- Never perform wiring at power-on. Failure to comply will result in an electric shock.
- Before wiring, cut off all equipment power supplies. Wait at least 10 minutes before further operations because residual voltage exists after power-off.
- Make sure that the equipment is well-grounded. Failure to comply will result in an electric shock.
- During wiring, follow the proper electrostatic discharge (ESD) procedures, and wear an antistatic wrist strap. Failure to comply will result in damage to internal equipment circuits.

- Never connect the power cable to output terminals of the equipment. Failure to comply may cause equipment damage or even a fire.
- When connecting a drive with the motor, make sure that the phase sequences of the drive and motor terminals are consistent to prevent reverse motor rotation.
- Wiring cables must meet diameter and shielding requirements. The shielding layer of the shielded cable must be reliably grounded at one end.
- After wiring, make sure that no screws are fallen and cables are exposed in the equipment.

Power-on

- Before power-on, make sure that the equipment is installed properly with reliable wiring and the motor can be restarted.
- Before power-on, make sure that the power supply meets equipment requirements to prevent equipment damage or even a fire.
- At power-on, unexpected operations may be triggered on the equipment. Therefore, stay away from the equipment.
- After power-on, do not open the cabinet door and protective cover of the equipment. Failure to comply will result in an electric shock.
- Do not touch any wiring terminals at power-on. Failure to comply will result in an electric shock.
- Do not remove any part of the equipment at power-on. Failure to comply will result in an electric shock.

Operation

- Do not touch any wiring terminals during operation. Failure to comply will result in an electric shock.
- Do not remove any part of the equipment during operation. Failure to comply will result in an electric shock.
- Do not touch the equipment shell, fan, or resistor for temperature detection. Failure to comply will result in heat injuries.
- Signal detection must be performed only by professionals during operation. Failure to comply will result in personal injuries or equipment damage.

- Prevent metal or other objects from falling into the device during operation. Failure to comply may result in equipment damage.
- Do not start or stop the equipment using a contactor. Failure to comply may result in equipment damage.

Maintenance

- Equipment installation, wiring, maintenance, inspection, or parts replacement must be performed only by professionals.
- Do not maintain the equipment at power-on. Failure to comply will result in an electric shock.
- Before maintenance, cut off all equipment power supplies and wait at least 10 minutes.

- Perform daily and periodic inspection and maintenance for the equipment according to maintenance requirements and keep a maintenance record.

Repair

- Equipment installation, wiring, maintenance, inspection, or parts replacement must be performed only by professionals.
- Do not repair the equipment at power-on. Failure to comply will result in an electric shock.
- Before inspection and repair, cut off all equipment power supplies and wait at least 10 minutes.

- Require repair services according to the product warranty agreement.
- When the equipment is faulty or damaged, require professionals to perform troubleshooting and repair by following repair instructions and keep a repair record.
- Replace quick-wear parts of the equipment according to the replacement guide.
- Do not operate damaged equipment. Failure to comply may result in worse damage.
- After the equipment is replaced, perform wiring inspection and parameter settings again.

Disposal

- Retire equipment by following local regulations or standards. Failure to comply may result in property damage, personal injuries, or even death.
- Dispose of or recycle retired equipment by following industry waste disposal standards to avoid environmental pollution.

Safety Signs

■ Description of safety signs in the user guide

Read the user guide before installation and operation.

Reliably ground the system and equipment.

Danger!

High temperature!

Prevent personal injuries caused by machines.

High voltage!

Wait xx minutes before further operations.

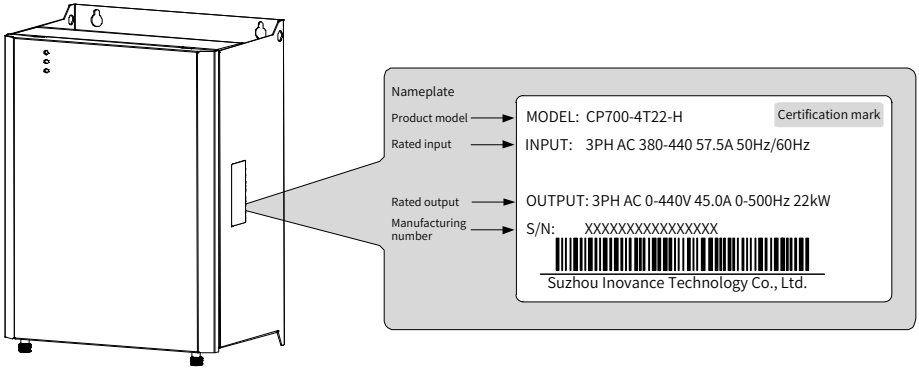
■ Description of safety signs on the equipment

For safe equipment operation and maintenance, comply with safety signs on the equipment, and do not damage or remove the safety labels. The following table describes the safety signs.

Safety Sign	Description
	◆ Read the user guide before installation and operation. Failure to comply will result in an electric shock. ◆ Do not remove the cover at power-on or within 10 minutes after power-off. ◆ Before maintenance, inspection, and wiring, cut off input and output power, and wait at least 10 minutes until the power indicator is off.

1 Product Information

1.1 Nameplate and Model Number



CP700 - 4T 22 - H

Code	Product Series
CP700	AC drive for air compressors

Code	Voltage Class
2T	Three phase 200–240 V
4T	Three phase 380–440 V

Code	Mounting Mode
H	Backplate mounting

Code	Motor (kW)
5.5	5.5
…	
90	90

Figure 1-1 Nameplate and model number

1.2 Components

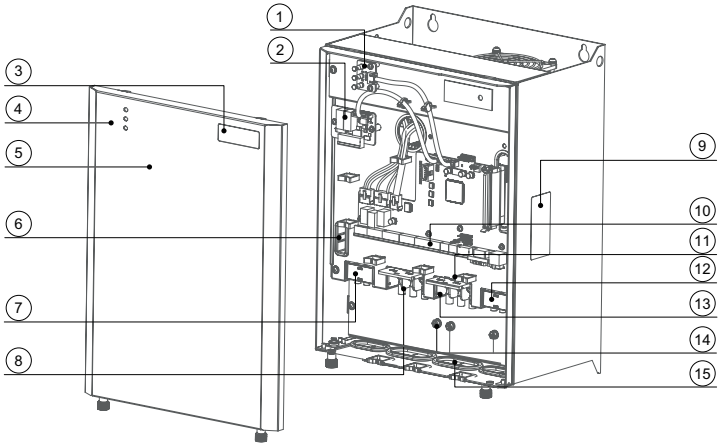


Figure 1-2 Description of components (CP700-4T18.5-H to CP700-4T22-H)

No.	Component Name	No.	Component Name
1	LED indicator panel	9	Nameplate
2	STO card (optional)	10	Control circuit port
3	Logo	11	Wire bracket
4	Indicator	12	Variable frequency cooling blower terminal
5	Front cover	13	Air end output terminal
6	EMC screw/voltage dependent resistor (VDR) grounding terminal	14	Grounding terminal
7	Mains frequency cooling blower terminal	15	Protective ring
8	Input terminal		

NOTE

Figure 1-2 describes the components of CP700-4T18.5-H to CP700-4T22-H as an example. The components vary depending on the models.

1.3 Technical Data

Table 1-2 CP700 series technical data

Item		Specification
Basic parameters	Output frequency	Vector control: 0–500 Hz
	Carrier frequency	2–8 kHz: The carrier frequency is adjusted automatically according to heatsink temperature.
	Input frequency resolution	Digital setting: 0.01 Hz
	AC drive capacity	Three phase 220 V: 7.5–45 kW Three phase 380 V: 5.5–75 kW
	Input voltage	Three phase 220 V: 220–240 VAC Three phase 380 V: 380–440 VAC
	Voltage fluctuation range	–15% to +10%
	Control mode	Speed sensorless vector control (SVC)
	Speed range	1:50 (SVC, motoring)
	Speed control accuracy	±0.1% (SVC)
	Speed fluctuation	1.5% (SVC); 3.0% (flux weakening region)
	Torque response	< 15 ms (SVC)
	Torque fluctuation	< 15% (SVC, regenerating); < 12% (motoring)
	Torque control mode	SVC
	Overload capacity	The air compressor air end overload current multiple and overload time are automatically estimated based on module temperature.
Customized features	Acceleration/ Deceleration curve	Straight line, S curve mode 1, and S curve mode 2
	Built-in PID	Built-in specialized pressure and temperature PID parameters for pressure and temperature control
	Communication/Bus	Standard RS485
	Running command channel	Two channels: terminal and communication command setting
	Frequency source	Digital setting

Item		Specification
HMI	Analog input	Two for the pressure sensor: 0–20 mA input, 12-bit resolution, and accuracy of 0.5%
		Two for the temperature sensor: resistance input, 12-bit resolution, and accuracy of 0.5%
	Digital input	Four common inputs: NPN input method
		Two PTC protective circuits (compatible with common inputs)
	Digital output	Two normally open (NO) relay outputs
	LED indicator	Three LED indicators (standard configuration)
Protection function	Short-circuit to ground upon power-on, motor overheat (PTC), AC drive overcurrent, AC drive overload, motor overload, AC drive overvoltage, AC drive undervoltage, AC drive overheat, output phase loss, input phase loss, communication fault, phase detection fault, current detection fault, motor auto-tuning fault, EEPROM read-write fault, and pre-charge resistor fault	
Air compressor control logic	Constant pressure value, unloading pressure, sleep wake-up pressure, shutdown preparation time, shutdown block time, constant temperature value, fan startup temperature, fan stop temperature, pre-operation frequency, pre-operation time, PID pressure adjustment, PID temperature adjustment, and solenoid valve control	
Environment	Operating location	Free from direct sunlight, dust, corrosive gas, combustible gas, oil mist, vapor, drip, or salt indoor
	Altitude	Max. 3000 m; de-rated by 1% per 100 m when the altitude is above 1000 m
	Operating temperature	–10°C to +50°C
	Humidity	Less than 95% RH without condensing
	Vibration	Less than 9.8 m/s^2(1G)
	Storage temperature	–20°C to +60°C

1.4 Overall Dimensions

The CP700 series AC drive for air compressors can be mounted on the wall. The specific mounting dimensions are as follows.

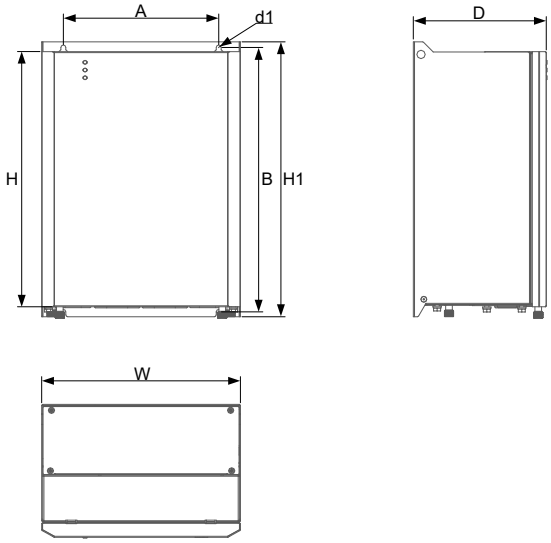

Figure 1-3 Wall-mounting dimensions (CP700-2T7.5-H to CP700-2T45-H and CP700-4T5.5-H to CP700-4T37-H)

Table 1-3 Physical dimensions and mounting hole diameters of wall-mounted models (CP700-2T7.5-H to CP700-2T45-H and CP700-4T5.5-H to CP700-4T37-H)

AC Drive Model	Physical Dimensions (mm)				Mounting Dimensions (mm)			Mass (kg)
	H1	H	W	D	A	B	d1	
Three phase 200–240 VAC, 50/60 Hz								
CP700-2T7.5-H	384	357	208	176	180	371	φ6	9.5
CP700-2T11-H	393	365	284	190	222	378	φ7	14.5
CP700-2T15-H	393	365	284	190	222	378	φ7	14.5
CP700-2T18.5-H	423	395	315	215	253	408	φ7	24.3
CP700-2T22-H	423	395	315	215	253	408	φ7	24.3
CP700-2T30-H	501	485	366	258	294	478	φ10	33.8
CP700-2T37-H	501	485	366	258	294	478	φ10	33.8
CP700-2T45-H	525	509	400	260	328	502	φ10	42.0
Three phase 380–440 VAC, 50/60 Hz								
CP700-4T5.5-H	344	317	168	176	140	331	φ6	7.0
CP700-4T7.5-H	344	317	168	176	140	331	φ6	7.0
CP700-4T11-H	384	357	208	176	180	371	φ6	9.5
CP700-4T15-H	384	357	208	176	180	371	φ6	9.5
CP700-4T18.5-H	393	365	284	190	222	378	φ7	14.5
CP700-4T22-H	393	365	284	190	222	378	φ7	14.5
CP700-4T30-H	423	395	315	215	253	408	φ7	24.3
CP700-4T37-H	423	395	315	215	253	408	φ7	24.3

1.5 Recommended System Solution

1.5.1 CP700 System Structure

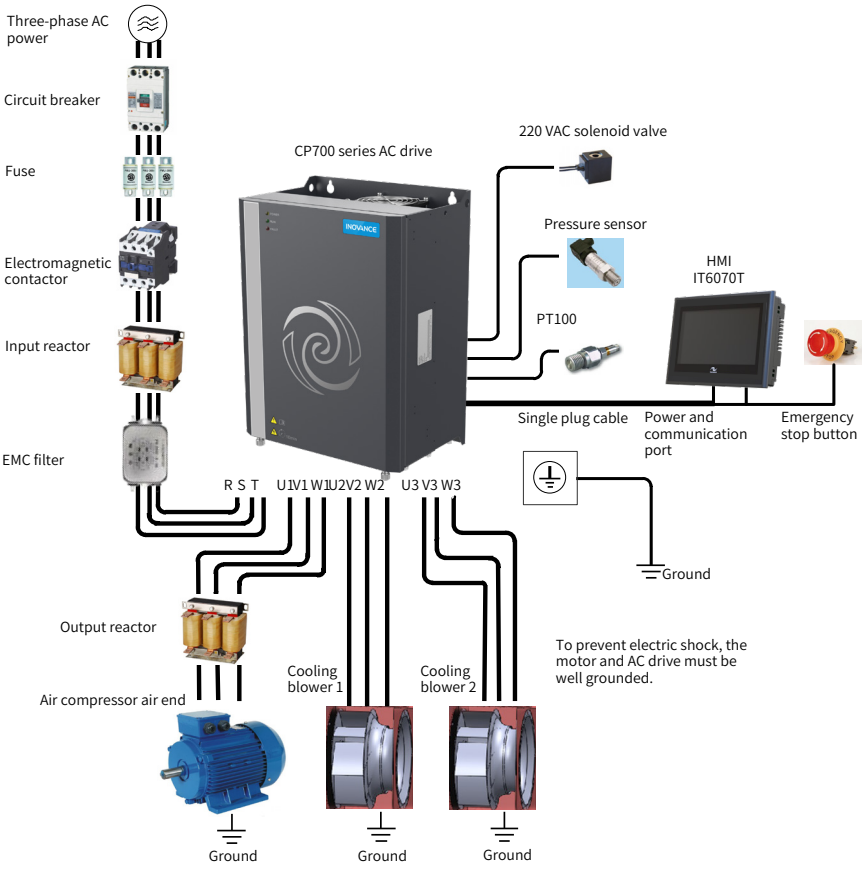

Figure 1-5 CP700 system structure

1.5.2 Peripheral Electrical Devices

Table 1-5 Description of peripheral electrical devices of the CP700 AC system

Part Name	Mounting Location	Function Description
Circuit breaker	Between power supply and AC drive input side	Short circuit breaker: cuts off power supply when overcurrent occurs on downstream devices to prevent accidents.
		Leakage current breaker: provides protection against potential leakage current during AC drive running to prevent electric shock and even a fire. Choose a proper leakage current breaker according to the application conditions.
Fuse	Between power supply and AC drive input side	Provides protection in case of short circuit and protects downstream semiconductor components.
Electromagnetic Contactor	Between the breaker and AC drive input side	Used for applying or cutting off power supply of the AC drive. Do not start and stop the AC drive frequently by switching the contactor on and off (at least 1-hour interval) nor use it to directly start the AC drive.
Input reactor	AC drive input side	Used for improving the power factor of power input side. Eliminates higher harmonics of the input side effectively and prevents other devices from being damaged due to distortion of voltage waveform. Eliminates input current unbalance caused by inter-phase unbalance.
EMC filter	AC drive input side	Reduces external conduction and radiation interference of the AC drive. Decreases conduction interference flowing from power supply to the AC drive and improves the anti-interference capacity of the AC drive.
Output reactor	Between the AC drive output side and motor (close to the AC drive)	The output side of an AC drive usually has much higher harmonics. When a motor is far away from the AC drive, much distributed capacitance exists in the circuit. Certain harmonics may cause resonance in the circuit, which will: 1) Degrade motor insulation performance and damage motor in the long run. 2) Generate large leakage current and cause frequent AC drive protection trips. If the distance between an AC drive and a motor is greater than 100 m, it is recommended that an AC output reactor be installed.
dv/dt reactor	AC drive output side (close to the AC drive)	The optional dv/dt drive ensures motor insulation and reduces bearing current.
Output magnetic core	AC drive output side (close to the AC drive)	Reduces bearing current.

Part Name	Mounting Location	Function Description
Air compressor air end	AC drive output side	Supplies compressed air.
Air compressor cooling blower	AC drive output side	Supplies cooling air to the air compressor system.
220 VAC solenoid valve	AC drive control terminal	Used to control system air intake.
Pressure sensor	AC drive control terminal	Detects system output pressure.
PT100	AC drive control terminal	Detects heat oil temperature of the air compressor.
HMI	System connection	Used as the air compressor display module.
Emergency stop switch	System connection	Used for stopping the air compressor system in emergency situations.
IoT	System connection	Used as the network connection port of the air compressor system.

2 Installation and Wiring

2.1 Installation

2.1.1 Installation Environment

1) Ambient temperature: Ambient temperature has a great effect on the AC drive's life. The operating ambient temperature of the AC drive must not exceed the allowable temperature range (-10°C to +50°C).

2) The installation surface of the AC drive must be flame retardant. A large amount of heat may be generated during the operation of the AC drive. Therefore, leave enough space for heat dissipation, and install the AC drive vertically to the mounting support using screws.

3) Install the AC drive in a place with no vibration. Vibration must not be greater than 1G. Keep away from devices such as punch presses.

4) Install the AC drive in an environment free from direct sunlight, moisture, and water drops.

5) Install the AC drive in an environment free from corrosive, inflammable, or explosive gases.

6) Install the AC drive in an environment free from grease dirt and dust.

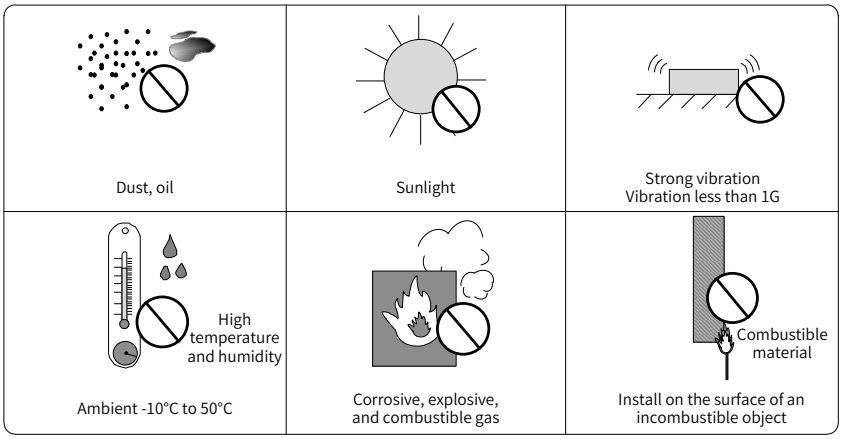

Figure 2-1 Installation environment

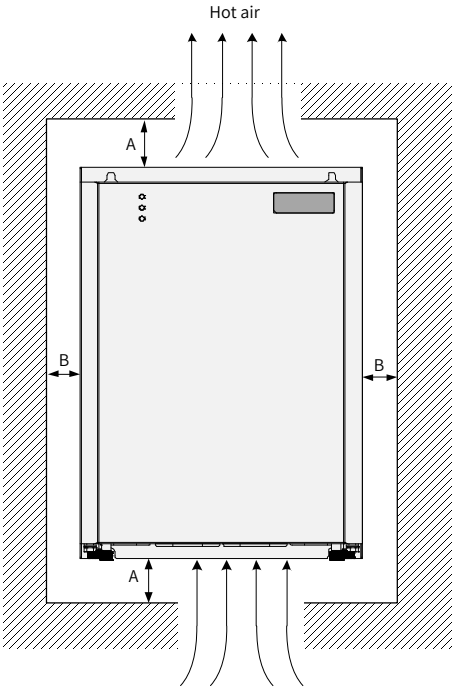
7) The AC drive must be installed in a fireproof cabinet with doors that provide effective electrical and mechanical protection. The installation must conform to local and regional laws and regulations, and relevant IEC requirements.

2.1.2 Installation Clearance Requirements



Installation clearance requirements (three phase 220 V)

Power Rating	Dimension	
7.5–22 kW	A ⩾ 200 mm	B ⩾ 50 mm
30–45 kW	A ⩾ 300 mm	B ⩾ 50 mm

Installation clearance requirements (three phase 380 V)

Power Rating	Dimension	
5.5–37 kW	A ⩾ 200 mm	B ⩾ 50 mm
45–90 kW	A ⩾ 300 mm	B ⩾ 50 mm

Vertical and upright Installation

Figure 2-2 Installation clearance requirements

2.1.3 Cover Removal and Mounting

Follow the guidelines below for cover removal and mounting.

Cover removal procedures	
	Step 1: Screw out two captive screws of the cover at the bottom using an inner hexagon screwdriver or inner hexagon wrench.

Cover removal procedures	
	Step 2: Hold the cover with both hands and turn it up by 15° (①), push it up (②), and then take it down.
	Cover removal is complete.
Cover mounting procedures	
	Step 1: Hold the cover with both hands, align the positioning pin at the top of the cover to the cabinet hole.
	Step 2: Push down the cover by following the arrow direction shown in the figure.

Cover removal procedures	
	Step 3: Tighten the captive screws. Cover mounting is complete.

2.2 Wiring

2.2.1 Main Circuit Terminal Arrangement

The main circuit terminals are wired in and out from the bottom, as shown below.

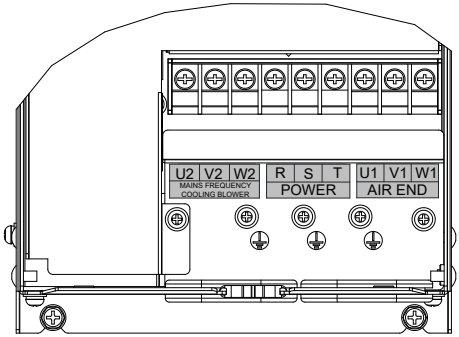


Figure 2-3 Main circuit terminal arrangement of CP700-4T5.5-H to CP700-4T7.5-H

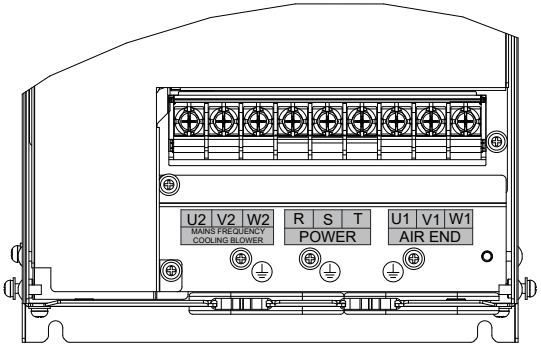

Figure 2-4 Main circuit terminal arrangement of CP700-2T7.5-H and CP700-4T11-H to CP700-4T15-H

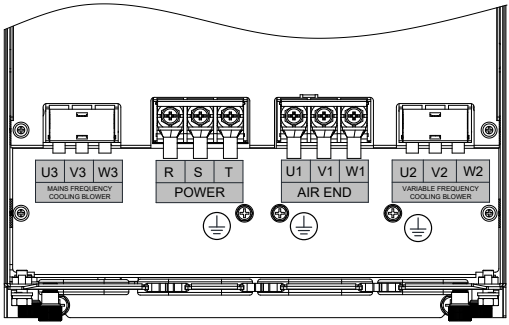

Figure 2-5 Main circuit terminal arrangement of CP700-2T11-H to CP700-2T15-H and CP700-4T18.5-H to CP700-4T22-H

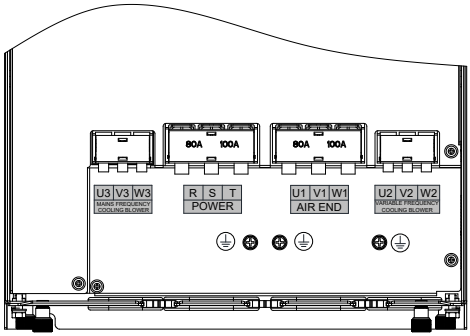

Figure 2-6 Main circuit terminal arrangement of CP700-2T18.5-H to CP700-2T22-H and CP700-4T30-H to CP700-4T37-H

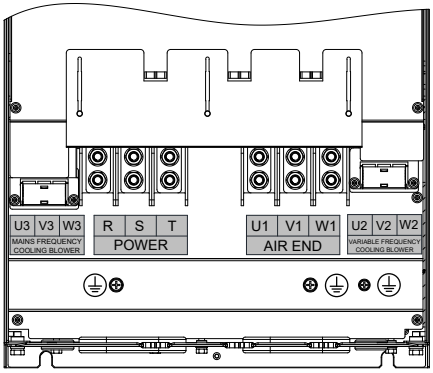

Figure 2-7 Main circuit terminal arrangement of CP700-2T30-H to CP700-2T45-H and CP700-4T45-H to CP700-4T90-H

Table 2-1 Main circuit terminal description

Terminal Symbol	Terminal Name	Function Description
R, S, and T	Input terminal	Three-phase AC input
U1, V1, and W1	Output terminal	Air compressor air end three-phase AC output
U2, V2, and W2	Mains frequency cooling blower terminal	Three phase 220 V: 7.5 kW three-phase AC output
		Three phase 380 V: 5.5–15 kW three-phase AC output
	Variable frequency cooling blower terminal	Three phase 380 V: 18.5–75 kW three-phase AC output
U3, V3, and W3	Mains frequency cooling blower terminal	Three phase 220 V: 11–45 kW three-phase AC output
		Three phase 380 V: 18.5–75 kW three-phase AC output
⏚	Grounding terminal	PE grounding

NOTE

If the AC drive is used in a 480 V grid system, contact our service engineers to replace the low-frequency transformer.

2.2.2 Control Terminal Arrangement

If an optional STO board is required during control circuit wiring, remove the cover of the AC drive before connecting control cables. (For details, see "2.1.3 Cover Removal and Mounting".) The following figures show the control board and STO board locations.

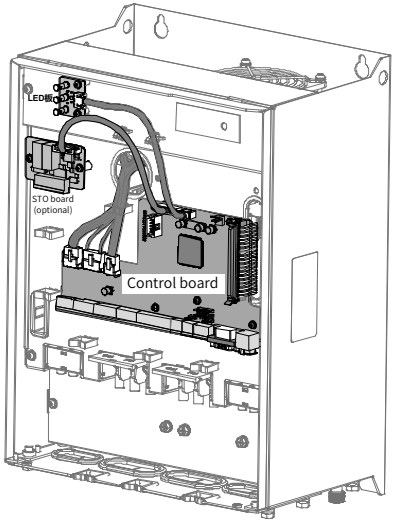

Figure 2-8 CP700 control board location

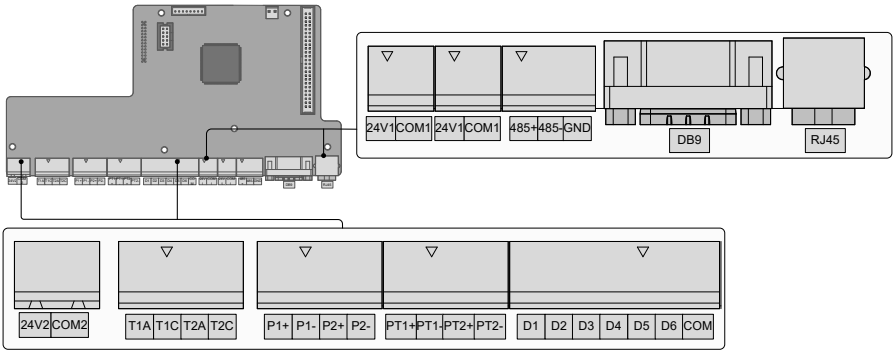

Figure 2-9 CP700 control terminal arrangement

Table 2-2 Description of control terminals

Category	Terminal Symbol	Function Description	Technical Specifications
Relay outputs	T1A, T1C, T2A, and T2C	Relay output T1A and T1C for the solenoid valves by default	Built-in 220 VAC power supply; power capacity 50 VA; T1A-T1C and T2A-T2C current outputs supported; total output less than 0.2 A T1A-T1C: NO T2A-T2C: NO
Pressure sensor inputs	P1+ and P2+	Pressure sensor power input	24 VDC, 4–20 mA input, active
	P1- and P2-	Pressure sensor signal input	
Temperature sensor inputs	PT1+ and PT2+	Temperature sensor PT100 inputs	–25°C to +220°C temperature detection with deviation of ±3°C , passive
	PT1- and PT2-		
Digital inputs	DI1–DI4	Common multi-function input terminals	Isolated drain input at a frequency lower than 100 Hz
	DI5–DI6	Common multi-function input terminals (PTC protection supported)	Isolated drain input at a frequency lower than 100 Hz; operation triggered when the PTC resistance is 2.3 kΩ
	COM	Common terminal of multi-function input terminals	Internally connected to GND
24V1 external power supply port	24V1	24 V power supplied in the board	24 V±10%; maximum output current 500 mA; touch screen power supply
	COM1	24 V power ground in the board

2.2.3 Control Terminal Wiring

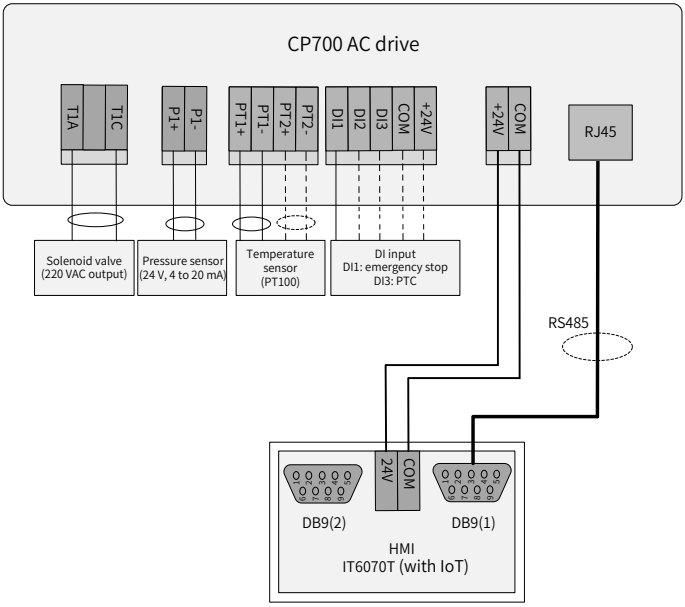

Figure 2-10 Control terminal wiring (three phase 380 V 5.5–15 kW, three phase 220 V 7.5 kW)

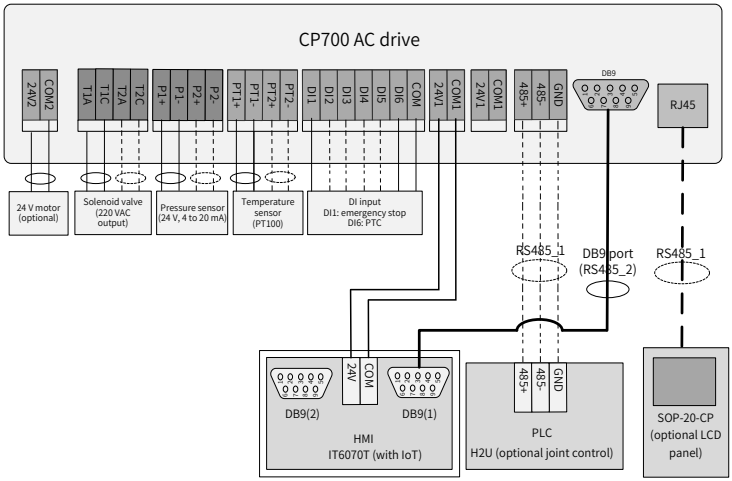

Figure 2-11 Control terminal wiring (three phase 380 V 18.5–90 kW, three phase 220 V 11–45 kW)

NOTE

In the preceding figures, solid lines indicate the minimum connections to run the system, while dotted lines indicate the optional wiring depending on air compressor configuration.

2.3 Power Grid System Requirement

The AC drive is applicable to power grid systems with neutral points grounded. If the AC drive is used in an IT power system, screw 1 shown in the following figure must be removed to disconnect the jumper of the VDR. Failure to comply may result in personal injury or damage to the AC drive.

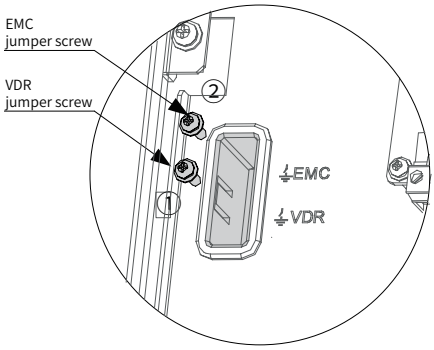

Figure 2-12 VDR and EMC grounding jumper positions

2.4 Wiring Recommendations

2.4.1 Main Power Cables

Connect main power cables as shown below. Air compressor air end input/output cables and cooling blower cables must be grounded separately.

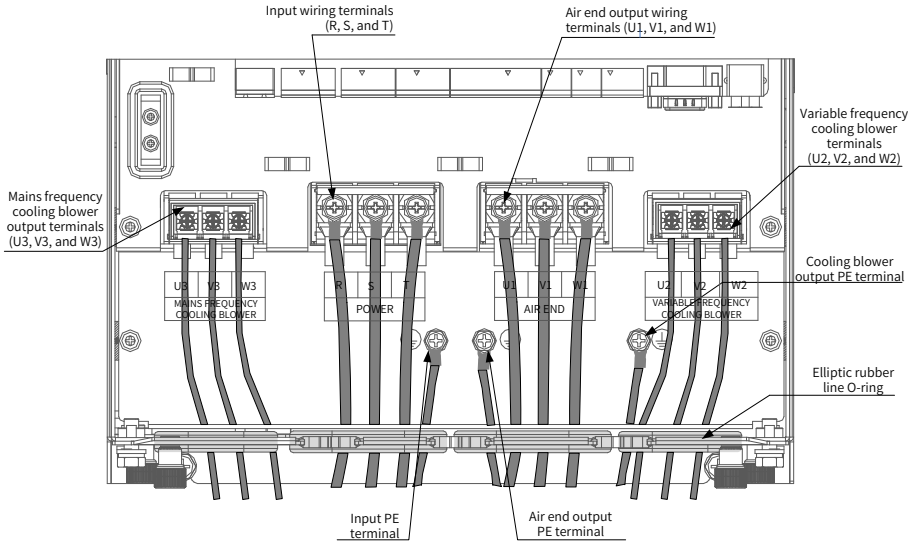

Figure 2-13 Wiring diagram of main power cables

Table 2-3 Main power cables specifications

AC Drive Model	Rated Input Current (A)	Input/Compressor Air End Output (U1/V1/W1)		Cooling Blower Output (U2/V2/W2)		Cooling Blower Output (U3/V3/W3)		Grounding Terminal Screw/ Tightening Torque (N·m)
		Recommended Cable (mm^2)	Terminal Screw/ Tightening Torque	Recommended cable (mm^2)	Terminal Screw/ Tightening Torque	Recommended Cable (mm^2)	Terminal Screw/ Tightening Torque	
Three phase 200 VAC to 240 VAC, 50/60 Hz								
CP700-2T7.5-H	35.0	10	M5 (2.8 N·m)	0.75	M5 (2.8 N·m)	/	/	M4 (1.2 N·m)

CP700-4T75-H	164.6	70	M12 (35 N·m)	1.5	M4 (1.2 N·m)	0.75	M4 (1.2 N·m)	M8 (13 N·m)
CP700-4T90-H	186.0	95	M12 (35 N·m)	1.5	M4 (1.2 N·m)	0.75	M4 (1.2 N·m)	M8 (13 N·m)

2.4.2 Control Cables

Perform control cable wiring and main power cable wiring separately, and fasten and fix cables with a tie around the port to ensure that the connection is tight and reliable.

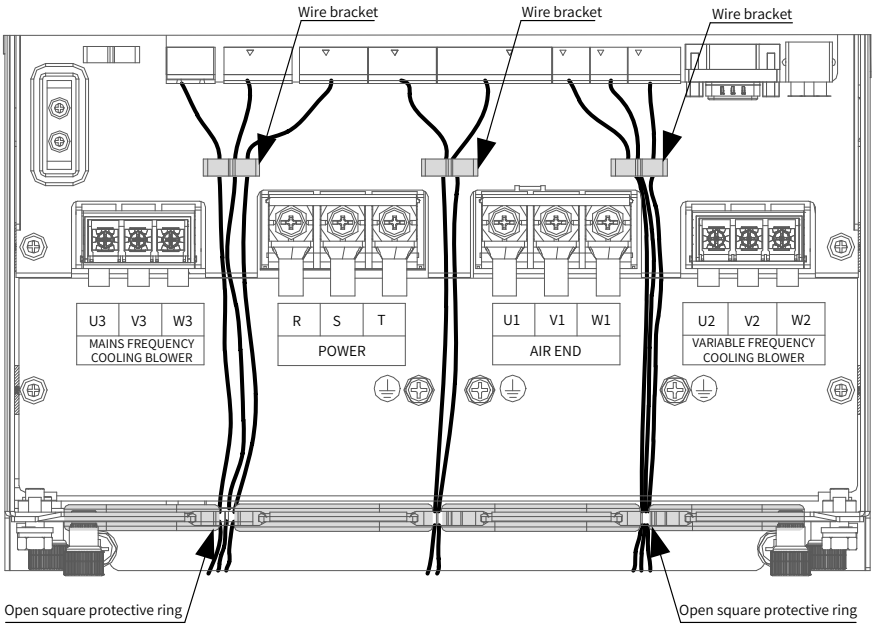

Figure 2-14 Wiring diagram of control cables

3 Display Description and Commissioning

3.1 Indicator Description

The CP700 series AC drive for air compressors has three LED indicators, indicating the real-time status for power, running, and faults. Indicator locations are shown below.

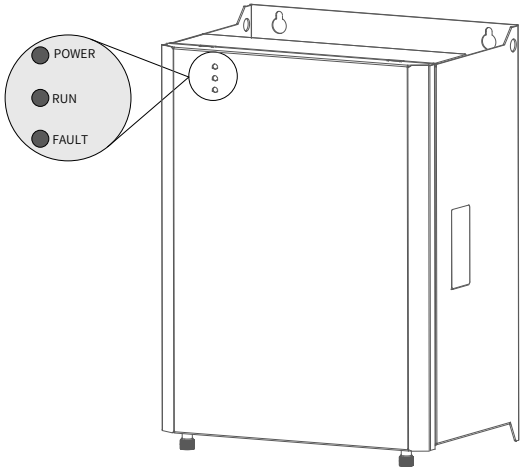

Figure 3-1 Indicator locations

Indicator Status		Status Description
Power indicators (green)	POWER	Off: power off
	POWER	On: power on
Running indicators (green)	RUN	Off: shut down
	RUN	On: running
Fault indicators (red)	FAULT	Off: normal
	FAULT	On: faulty

3.2 Commissioning Process

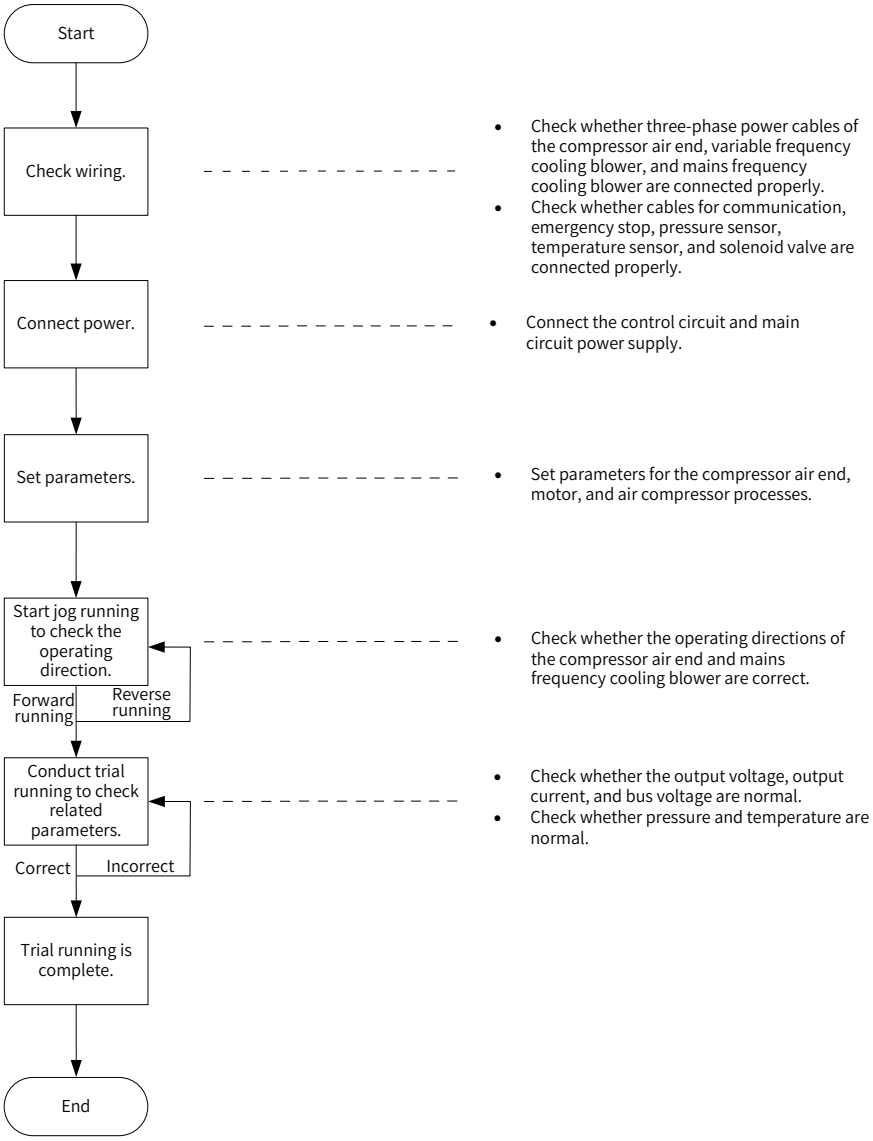

Figure 3-2 Commissioning process of the CP700 series AC drive for air compressors

3.3 System Commissioning Case Study

1) When power is on, HMI display automatically switches to the following page.

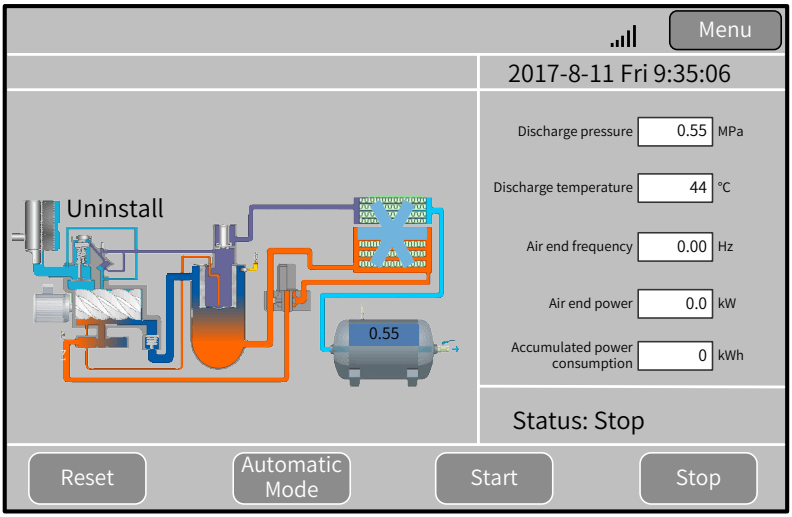

Figure 3-3 HMI main page (example)

2) Touch "Menu" in the upper right corner of the main page to access the page shown in Figure 3-4. Touch "Homepage", "Running Data", "User Parameters", "Maintenance Parameters", "Protection Parameters", "AC Drive Parameters", "Manufacturer Parameters", "Timing Switch", "Alarms", and "Manufacturer Information" in sequence to view more details.

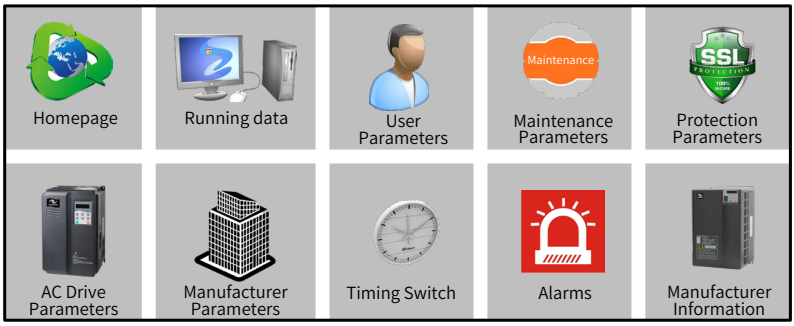

Figure 3-4 Menu (example)

3) Touch "User Parameters" to open the "Rights Management" dialog box for password setting.

Figure 3-5 Password setting dialog box (example)

Touch the password input box to enable the digit keypad and enter a password, as shown in Figure 3-6.

Figure 3-6 Entering a password (example)

NOTE

◆ After entering a correct password, touch "ENT" to open the "User Parameters" page, as shown in Figure 3-7. If an incorrect password is input, touch "CR" and enter the password again.

On the "User Parameters" page, set parameters related to the compressor air end and cooling blower, as shown in Figure 3-7.

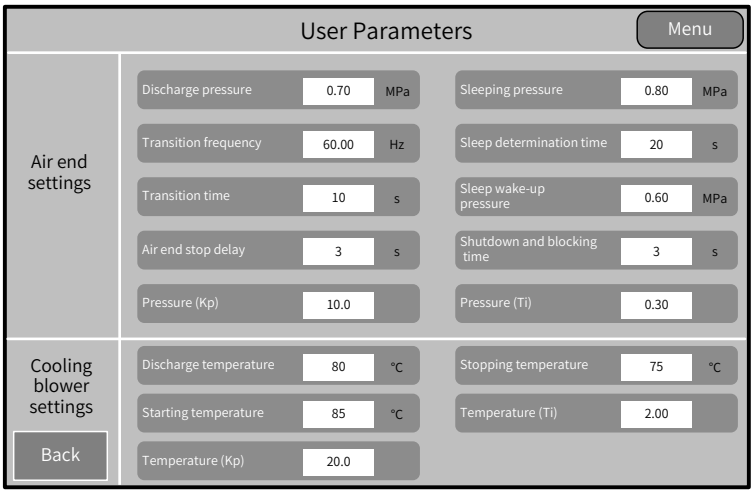

Figure 3-7 User parameter settings (example)

4) Touch "Maintenance Parameters" and "Protection Parameters" in sequence to set parameters related to the air compressor.

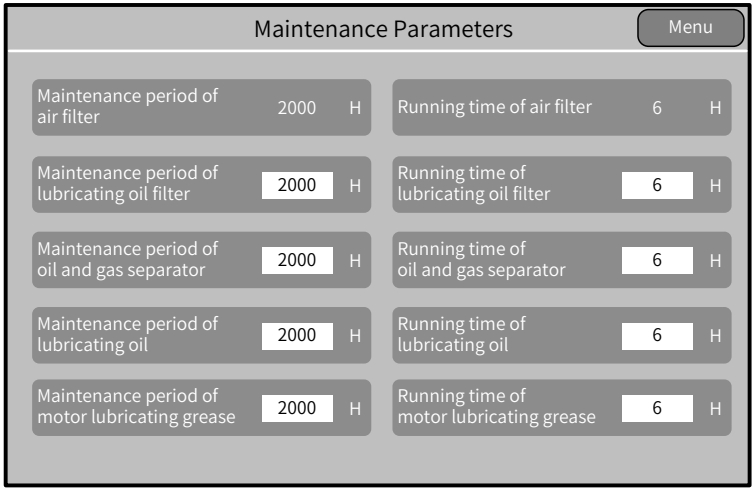

Figure 3-7 Maintenance parameter settings (example)

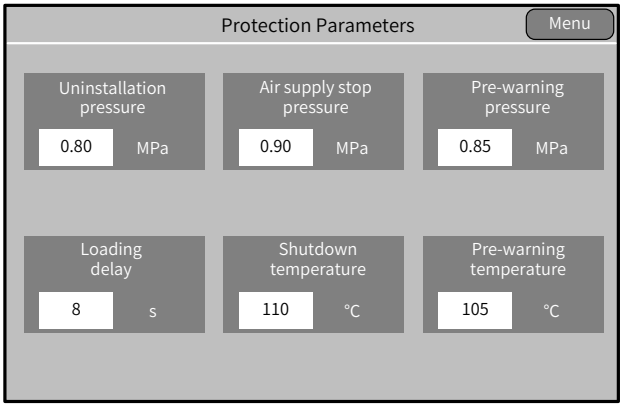

Figure 3-8 Protection parameter settings (example)

5) Touch "AC Drive Parameters" to set parameters.

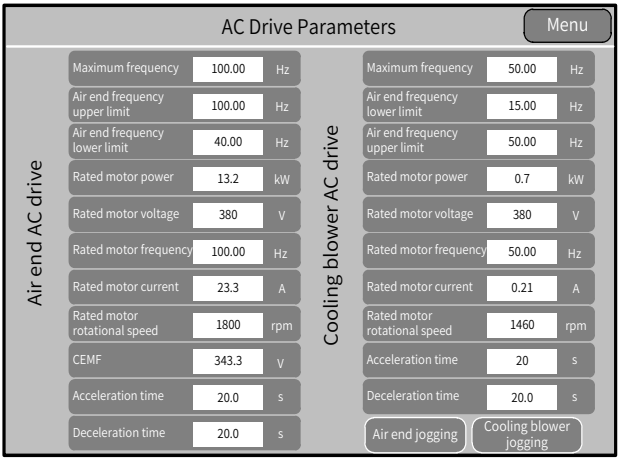

Figure 3-9 AC drive parameter settings (example)

6) Touch "Air End Jogging" and "Cooling Blower Jogging" respectively to conduct trial running. Observe the motor (including the compressor air end and mains frequency cooling blower) operation direction. If the motor operates in a wrong direction, disconnect the power supply and exchange the R and S phase sequences of the motor. Then, conduct trial running again until the motor operates in the correct direction.

7) Touch "Start" on the homepage shown in Figure 3-3 to start the air compressor. Check that the operating current and temperature are within the normal range, solenoid valve status is correct, and pressure and temperature changes are normal.

8) Shut down the air compressor. The commissioning is complete.

4 Troubleshooting

4.1 Fault Codes and Solutions

The following faults may occur during the use of the AC drive. Perform fault analysis according to the solutions below.

Fault Code	Fault Description	Possible Cause	Solution
Err02	Overcurrent during acceleration	1) The output circuit of the AC drive is grounded or short circuited. 2) The control mode is SVC but motor auto-tuning is not performed. 3) Acceleration time is too short under V/F control. 4) The overcurrent stall prevention parameters are set improperly for V/F control. 5) The customized torque boost or the V/F curve is improper under V/F control. 6) The motor is started while rotating. 7) The AC drive suffers external interference. 8) The motor is short-circuited to ground or between phases.	1) Eliminate external faults. Check whether short-circuit occurs on the motor or contactor. 2) Set the motor parameters according to the motor nameplate and perform motor auto-tuning. 3) Increase the acceleration time. 4) Ensure that current limit is enabled (F3-19 = 1). The setting of F3-18 (V/F current limit level) is too large. Adjust it between 120% and 150%. The setting of F3-20 (V/F current limit gain) is too small. Adjust it between 20 and 40. 5) Adjust the customized torque boost or V/F curve. 6) Select rotational speed tracking restart for the asynchronous motor or start the motor after it stops. 7) View historical fault records. If the current value is far from the overcurrent level, find the interference source. If no external interference exists, the driver board or hall device may be faulty. 8) Check whether the motor is short-circuited to ground using a multimeter.

Fault Code	Fault Description	Possible Cause	Solution
Err03	Overcurrent during deceleration	1) The output circuit of the AC drive is grounded or short circuited. 2) The control mode is SVC but motor auto-tuning is not performed. 3) Deceleration time is too short under V/F control. 4) The overcurrent stall prevention parameters are set improperly for V/F control. 5) The customized torque boost or the V/F curve is improper under V/F control. 6) The motor is started while rotating. 7) The AC drive suffers external interference. 8) The motor is short-circuited to ground or between phases.	1) Eliminate external faults. Check whether short-circuit occurs on the motor or contactor. 2) Set the motor parameters according to the motor nameplate and perform motor auto-tuning. 3) Increase the deceleration time. 4) Ensure that current limit is enabled (F3-19 = 1). The setting of F3-18 (V/F current limit level) is too large. Adjust it between 120% and 150%. The setting of F3-20 (V/F current limit gain) is too small. Adjust it between 20 and 40. 5) Adjust the customized torque boost or V/F curve. 6) Select rotational speed tracking restart for the asynchronous motor or start the motor after it stops. 7) View historical fault records. If the current value is far from the overcurrent level, find the interference source. If no external interference exists, the driver board or hall device may be faulty. 8) Check whether the motor is short-circuited to ground using a multimeter.

Fault Code	Fault Description	Possible Cause	Solution
Err04	Overcurrent at constant speed	1) The output circuit of the AC drive is grounded or short circuited. 2) The control mode is SVC but motor auto-tuning is not performed. 3) Acceleration time is too short under V/F control. 4) The overcurrent stall prevention parameters are set improperly for V/F control. 5) The customized torque boost or the V/F curve is improper under V/F control. 6) The motor is started while rotating. 7) The AC drive suffers external interference. 8) The motor is short-circuited to ground or between phases.	1) Eliminate external faults. Check whether short-circuit occurs on the motor or contactor. 2) Set the motor parameters according to the motor nameplate and perform motor auto-tuning. 3) Increase the acceleration time. 4) Ensure that current limit is enabled (F3-19 = 1). The setting of F3-18 (V/F current limit level) is too large. Adjust it between 120% and 150%. The setting of F3-20 (V/F current limit gain) is too small. Adjust it between 20 and 40. 5) Adjust the customized torque boost or V/F curve. 6) Select rotational speed tracking restart for the asynchronous motor or start the motor after it stops. 7) View historical fault records. If the current value is far from the overcurrent level, find the interference source. If no external interference exists, the driver board or hall device may be faulty. 8) Check whether the motor is short-circuited to ground using a multimeter.
Err05	Overvoltage during acceleration	1) The input voltage is too high. 2) An external force drives the motor during acceleration. 3) The overvoltage stall prevention parameters are set improperly. 4) The acceleration time is too short.	1) Adjust the voltage to the normal range. 2) Cancel the external force. 3) Check that the voltage limit function is enabled (F3-23 = 1). If the setting of F3-22 (V/F voltage limit) is too large, adjust it between 700 V and 770 V. If the setting of F3-24 (V/F frequency gain for voltage limit) is too small, adjust it between 30 and 50. 4) Increase the acceleration time.

Fault Code	Fault Description	Possible Cause	Solution
Err06	Overvoltage during deceleration	1) The overvoltage stall prevention parameters are set improperly. 2) An external force drives the motor during deceleration. 3) The deceleration time is too short.	1) Check that the voltage limit function is enabled (F3-23 = 1). If the setting of F3-22 (V/F voltage limit) is too large, adjust it between 700 V and 770 V. If the setting of F3-24 (V/F frequency gain for voltage limit) is too small, adjust it between 30 and 50. 2) Cancel the external force or install a braking resistor. 3) Increase the deceleration time.
Err07	Overvoltage at constant speed	1) The overvoltage stall prevention parameters are set improperly. 2) An external force drives the motor during constant speed. 3) The input voltage fluctuates greatly in the field.	1) Check that the voltage limit function is enabled (F3-23 = 1). If the setting of F3-22 (V/F voltage limit) is too large, adjust it between 700 V and 770 V. If the setting of F3-24 (V/F frequency gain for voltage limit) is too small, adjust it between 30 and 50. If the setting of F3-26 (V/F frequency rise threshold during voltage limit) is too small. Adjust it between 5 Hz and 20 Hz. 2) Cancel the external force. 3) Adjust the input voltage fluctuation range to an allowed range.
Err09	Undervoltage	1) An instantaneous power failure occurs. 2) The AC drive's input voltage is not within the allowable range. 3) The bus voltage is abnormal. 4) The rectifier bridge, snubber resistor, driver board, or the control board is abnormal.	1) Enable the power dip ride through function (F9-59 ≠ 0). 2) Adjust the voltage to the normal range. 3) Contact the agent or Inovance for technical support. 4) Contact the agent or Inovance for technical support.

Fault Code	Fault Description	Possible Cause	Solution
Err10	AC drive overload	1) The load is too heavy or locked-rotor occurs on the motor. 2) The AC drive model is of too low power rating. 3) The air end of the air compressor rotates in the reverse direction.	1) Reduce the load and check the motor and mechanical conditions. 2) Select an AC drive of higher power rating. 3) Check that the motor wiring is correct.
Err11	Motor overload	1) F9-01 (Motor overload protection gain) is set improperly. 2) The load is too heavy or locked-rotor occurs on the motor.	1) Set F9-01 (Motor overload protection gain) properly. 2) Reduce the load and check the motor and mechanical conditions.
Err12	Input phase loss	1) The three-phase power input is abnormal. 2) The driver board, lightning protection board, control board, or rectifier bridge is abnormal.	1) Eliminate external faults. 2) Contact the agent or Inovance for technical support.
Err13	Output phase loss	1) The motor is faulty. 2) The cables connecting the AC drive and the motor are abnormal. 3) The three-phase outputs of the AC drive are unbalanced when the motor is running. 4) The driver board or the IGBT is abnormal.	1) Check whether the motor is disconnected. 2) Eliminate external faults. 3) Check whether the motor three-phase winding is normal. 4) Contact the agent or Inovance for technical support.
Err14	IGBT overheat	1) The ambient temperature is too high. 2) The air filter is blocked. 3) The fan is damaged. 4) The thermistor of the IGBT is damaged. 5) The IGBT is damaged.	1) Reduce the ambient temperature. 2) Clean the air filter. 3) Replace the damaged fan. 4) Contact the agent or Inovance for technical support. 5) Contact the agent or Inovance for technical support.
Err15	External device fault	An external fault signal has been input through the DI.	Confirm that the mechanical condition allows restart (F8-18) and reset the operation.

Fault Code	Fault Description	Possible Cause	Solution
Err16	Communication fault	1) The host controller is abnormal. 2) The communication cable is faulty. 3) F0-28 (Auxiliary frequency coefficient) is set improperly for the communication extension card. 4) Communication parameters in group FD are set improperly.	1) Check wiring of the host controller. 2) Check connection of the communication cable. 3) Set the communication extension card type correctly. 4) Set communication parameters in group FD properly. After all the preceding solutions are done but the fault still exists, restore the default settings.
Err17	Contactor fault	1) The driver board and power supply are abnormal. 2) The contactor is abnormal. 3) The lightning protection board is abnormal.	Contact the agent or Inovance for technical support.
Err18	Current detection fault	1) The hall sensor is abnormal. 2) The driver board is abnormal.	Contact the agent or Inovance for technical support.
Err19	Motor auto-tuning fault	1) The motor parameters are not set according to the nameplate. 2) Motor auto-tuning times out.	1) Set the motor parameters according to the nameplate properly. 2) Check the cables connecting the AC drive and the motor.
Err21	EEPROM read-write fault	The EEPROM chip is damaged.	Replace the main control board.
Err23	Short circuit to ground	The motor is short circuited to the ground.	Replace the cable or motor.
Err26	Accumulative running time reached	The accumulative running time reaches the setting value.	Clear the record through parameter initialization.
Err29	Accumulative power-on time reached	The accumulative power-on time reaches the setting value.	Clear the record through parameter initialization.
Err40	Pulse-by-pulse current limit fault	1) The load is too heavy or locked-rotor occurs on the motor. 2) The AC drive model is of too low power rating.	1) Reduce the load and check the motor and mechanical conditions. 2) Select an AC drive of higher power rating.

Fault Code	Fault Description	Possible Cause	Solution
Err42	Large speed error	1) Motor auto-tuning is not performed. 2) F9-69 (Detection level of speed error) and F9-70 (Detection time of speed error) are set improperly. 3) The load is too heavy.	1) Perform motor auto-tuning. 2) Set F9-69 (Detection level of speed error) and F9-70 (Detection time of speed error) correctly based on actual conditions. 3) Select an AC drive properly.
Err45	Motor overtemperature	1) Cable connection of the temperature sensor becomes loose. 2) The motor temperature is too high.	1) Check cable connection of the temperature sensor. 2) Increase the carrier frequency or take other measures to cool the motor.
A65	Pre-warning of pressure sensor 2	1) The pressure sensor is connected with the temperature sensor cable by mistake. 2) The setting of P2 pressure range does not meet requirements of the pressure sensor. 3) A8-10 (Stop pressure setting value - protection pressure) and A8-11 (Pre-warning pressure setting value) are set to small values. 4) The pressure sensor is abnormal.	1) Connect the pressure sensor cable correctly. 2) Set the P2 pressure range according to the requirements of the pressure sensor. 3) Set A8-10 (Stop pressure setting value - protection pressure) and A8-11 (Pre-warning pressure setting value) based on actual requirements. 4) Replace the faulty pressure sensor.
Err66	Overpressure of pressure sensor 2		
Err67	Overtemperature of temperature sensor 2	1) The temperature sensor is connected with the pressure sensor cable by mistake. 2) The sensor temperature is too high due to poor heat dissipation.	1) Connect the temperature sensor cable correctly. 2) Check whether the air filter is clogged and the cooling fan rotates in the reverse direction.
A68	Pre-warning of temperature sensor 2		

Fault Code	Fault Description	Possible Cause	Solution
A70	Pre-warning of pressure sensor 1	1) The pressure sensor is connected with the temperature sensor cable by mistake. 2) The setting of P1 pressure range does not meet requirements of the pressure sensor. 3) A8-10 (Stop pressure setting value-protection pressure) and A8-11 (Pre-warning pressure setting value) are set to small values. 4) The pressure sensor is abnormal.	1) Connect the pressure sensor cable correctly. 2) Set the P1 pressure range according to the requirements of the pressure sensor. 3) Set A8-10 (Stop pressure setting value-protection pressure) and A8-11 (Pre-warning pressure setting value) based on actual requirements. 4) Replace the faulty pressure sensor.
Err71	Overpressure of pressure sensor 1		
Err72	Overtemperature of temperature sensor 1	1) The temperature sensor is connected with the pressure sensor cable by mistake. 2) The sensor temperature is too high due to poor heat dissipation.	1) Connect the temperature sensor cable correctly. 2) Check whether the air filter is clogged and the cooling fan rotates in the reverse direction.
A73	Pre-warning of temperature sensor 1		
Err74	Pressure sensor disconnection fault	1) The pressure sensor wiring is abnormal. 2) The pressure or temperature sensor is abnormal.	1) Check the wiring. 2) Replace the faulty pressure or temperature sensor.
Err75	Temperature sensor disconnection fault		
A76	Air filter maintenance pre-warning	The value of A8-28 (Air filter running time) reaches that of A8-23 (Air filter maintenance setting time) in maintenance parameters.	Maintain the air filter and clear A8-28 (Air filter running time).
A77	Oil filter maintenance pre-warning	The value of A8-29 (Oil filter running time) reaches that of A8-24 (Oil filter maintenance setting time) in maintenance parameters.	Maintain the oil filter and clear A8-29 (Oil filter running time).
A78	Oil/Gas separation maintenance pre-warning	The value of A8-30 (Oil gas separating running time) reaches that of A8-25 (Oil gas separating maintenance setting time) in maintenance parameters.	Maintain the oil and gas separator and clear A8-30 (Oil gas separating running time).

Fault Code	Fault Description	Possible Cause	Solution
A79	Motor lubricating grease maintenance pre-warning	The value of A8-31 (Motor lubricating grease running time) reaches that of A8-26 (Motor lubricating grease maintenance setting time) in maintenance parameters.	Apply the lubricating grease and clear A8-31 (Motor lubricating grease running time).
Err80	Lubricating oil maintenance pre-warning	The value of A8-32 (Lubricating oil applying time) reaches that of A8-27 (Lubricant maintenance setting time) in maintenance parameters.	Apply the lubricating oil and clear A8-32 (Lubricating oil applying time).
Err81	PTC2 overtemperature	The PTC thermistor is disconnected due to motor overtemperature. The DI terminal detects that the motor PTC signal is disconnected.	1) Check the wiring. PTC2 indicates the cooling blower PTC, which must be connected to DI5 with function 58 and COM. If no cooling blower PTC is available, DI5 should be allocated with function 0. 2) Check whether motor overtemperature condition really exists. Check the cooling blower motor. 3) Check whether the cooling blower PTC is damaged. Check whether the PTC resistance is less than 3 kΩ (by disconnecting it from the drive). 4) Short DI5 and COM or allocate DI5 with function 0 temporarily to disable PTC2.
Err82	Oil fine separator blocked	1) The oil fine separator is blocked. 2) The DI terminal setting and wiring are incorrect.	1) Clean the oil fine separator. 2) Check the DI terminal function setting and wiring.
Err83	Separator blocked	1) The separator is blocked. 2) The DI terminal setting and wiring are incorrect.	1) Clean the separator. 2) Check the DI terminal function setting and wiring.
Err84	Oil filter blocked	1) The oil filter is blocked. 2) The DI terminal setting and wiring are incorrect.	1) Clean the oil filter. 2) Check the DI terminal function setting and wiring.
Err85	Air filter blocked	1) The air filter of the oil fine separator is blocked. 2) The DI terminal setting and wiring are incorrect.	1) Clean the air filter. 2) Check the DI terminal function setting and wiring.

Fault Code	Fault Description	Possible Cause	Solution
Err86	PTC overtemperature	The PTC thermistor is disconnected due to motor overtemperature. The DI terminal detects that the motor PTC signal is disconnected.	1) Check the wiring. PTC indicates the main motor PTC, which must be connected to DI6 with function 57 and COM. If no main motor PTC is available, DI6 should be allocated with function 0. 2) Check whether motor overtemperature condition really exists. Check heat dissipation of the main motor. 3) Check whether the main motor PTC is damaged. Check whether the PTC resistance is less than 3 kΩ (by disconnecting it from the drive). Short DI6 and COM or allocate DI6 with function 0 temporarily to disable PTC.
A87	Limited running time pre-warning	The running time reaches the set limited running time.	Clear the running time or disable the limited running function.
Err88	Stop for air filter maintenance	Air filter running time - Air filter maintenance period ⩾ Long-time stop pre-warning time	1) Maintain the equipment and clear related running time. 2) Contact the agent or Inovance for technical support.
Err89	Stop for oil filter maintenance	Oil filter running time - Oil filter maintenance period ⩾ Long-time stop pre-warning time	1) Maintain the equipment and clear related running time. 2) Contact the agent or Inovance for technical support.
Err90	Stop for oil/ gas separation maintenance	Oil/gas separator running time - Oil/gas separator maintenance period ⩾ Long-time stop pre-warning time	1) Maintain the equipment and clear related running time. 2) Contact the agent or Inovance for technical support.
Err91	Stop for motor lubricating grease maintenance	Lubricating grease applying time - Lubricating grease maintenance period ⩾ Long-time stop pre-warning time	1) Maintain the equipment and clear related running time. 2) Contact the agent or Inovance for technical support.
Err92	Stop for lubricating oil maintenance	Lubricating oil applying time - Lubricating oil maintenance period ⩾ Long-time stop pre-warning time	1) Maintain the equipment and clear related running time. 2) Contact the agent or Inovance for technical support.
Err93	Stop after pressure pre-warning time exceeded	Duration from the pressure pre-warning reported ⩾ Long-time stop pre-warning time	See the solutions for A70/71.

Fault Code	Fault Description	Possible Cause	Solution
Err94	Stop after temperature pre-warning time exceeded	Duration from the temperature pre-warning reported ⩾ Long-time stop pre-warning time	See the solutions for Err72/A73.
Err95	Solenoid valve overcurrent	1) The model and specifications of the solenoid valve are not suitable for the transformer. 2) The solenoid valve is broken. 3) When the AC drive is running with load, the TA/TC terminal has no 220 V output.	1) Check whether the model and specifications of the solenoid valve are suitable for the transformer (AC 110/220 V). 2) Replace the solenoid valve. 3) Contact the agent or Inovance for technical support.
Err96	Phase sequence abnormal	Three-phase input sequence abnormal (R, S, T)	Exchange any two phases among the three input phases.
Err97	Output phase loss of mains frequency cooling blower	1) The motor wiring is incorrect. 2) The motor cooling blower is damaged. 3) The fuse is loose or damaged.	1) Wire the motor properly. 2) Use a multimeter to measure the resistance between phases. If open circuit exists, replace the motor cooling blower. 3) Fix the fuse properly or replace the fuse.
Err98	Low pump pressure	1) The water pump function is not provided, and the DI terminal is allocated with function 59. 2) The water pump function is provided, and the DI terminal is allocated with function 59.	1) Allocate the DI terminal with function 0. 2) If the water pump is abnormal, repair or replace it.
Err99	Mains frequency cooling blower overload	1) The power class of the mains frequency cooling blower is too high. 2) The motor cooling blower is blocked or stuck with a foreign matter.	1) Select a suitable cooling blower. 2) Clear the foreign matter.

4.2 Symptoms and Solutions

No.	Fault Symptom	Possible Cause	Possible Solution
1	There is no display while power-on.	There is no power supply to the AC drive or the power input to the AC drive is too low.	Check the power supply.
		The switching power supply on the driver board of the AC drive is faulty.	Check the bus voltage.
		The cable connecting the control board and the driver board and the operating panel is broken.	Re-connect the 8-pin wire and 40-pin wire.
		The pre-charge resistor of the AC drive is damaged.	Contact the agent or Inovance for technical support.
		The control board or operating panel is faulty.	
		The rectifier bridge is damaged.	
2	"HC" is displayed while power-on.	The cable connecting the driver board and the control board is in poor contact.	Re-connect the 8-pin wire and 28-pin wire.
		Related components on the control board are damaged.	Contact the agent or Inovance for technical support.
		The motor or motor cable is short circuited to the ground.	
		The hall is damaged.	
		The grid voltage is too low.	
3	"Err23" is displayed while power-on.	The motor or motor cable is short circuited to the ground.	Use an insulation tester to measure the insulation resistance of the motor and motor cable.
		The AC drive is damaged.	Contact the agent or Inovance for technical support.
4	The display is normal while power-on. But after running, "HC" is displayed and the AC drive stops immediately.	The cooling fan is damaged or locked-rotor occurs.	Replace the damaged fan.
		The cable of the external control terminal is short circuited.	Eliminate the external short-circuit fault.
5	"Err14" (IGBT overheat) is detected frequently.	The setting of carrier frequency is too high.	1. Reduce F0-15 (Carrier frequency).
		The cooling fan is damaged, or ventilation is clogged.	Replace the fan or clean the ventilation.
		Components inside the AC drive are damaged (thermistor or others).	Contact the agent or Inovance for technical support.

No.	Fault Symptom	Possible Cause	Possible Solution
6	The motor does not rotate after the AC drive runs.	The motor and motor cable are in poor contact.	Check that the wiring between the AC drive and motor is normal.
		Related AC drive parameters (motor parameters) are set improperly.	Restore the factory parameters and reset related parameters properly. Check that the rated motor parameters are set properly, including rated motor frequency and rated motor speed. Check that F0-01 (Motor 1 control mode) and F0-02 (Command source selection) are set properly. Modify F3-01 (Torque boost) in V/F control mode under heavy-load start.
		The cable connecting the driver board and control board is in poor contact.	Re-connect wirings and ensure secure connection.
		The driver board is faulty.	Contact the agent or Inovance for technical support.
7	DI terminals are disabled.	Related parameters are incorrectly set.	Check and set the parameters in group F4 again.
		External signals are incorrect.	Re-connect external signal cables.
		The jumper across OP and +24 V becomes loose.	Re-confirm the jumper across OP and +24 V.
		The control board is faulty.	Contact the agent or Inovance for technical support.
8	The motor speed does not rise in FVC mode.	The driver board is faulty.	Contact the agent or Inovance for technical support.
9	The AC drive detects overcurrent and overvoltage frequently.	Motor parameters are set improperly.	Reset motor parameters or perform motor auto-tuning.
		The acceleration/deceleration times are improper.	Set proper acceleration/deceleration times.
		The load fluctuates.	Contact the agent or Inovance.
10	"Err17" is reported while power-on (or during running).	The soft startup contactor is not closed.	Check whether the contactor cable is loose. Check whether the contactor is faulty. Check whether 24 V power supply of the contactor is faulty. Contact the agent or Inovance for technical support.

5 Maintenance

5.1 Daily Maintenance

Check the following items daily to avoid deterioration in performance or products. Copy this checklist and sign the "checked" column after each inspection.

Inspection Item	Inspection Details	Checked
Installation Environment	◆ Check whether the ambient temperature, humidity, and vibration are within the permissible range. ◆ Check whether the AC drive is installed in an environment without dust, combustible and explosive gases, oil mist, and water drops.	
Electric cabinet	◆ Check whether the mounting bracket is loose. ◆ Check whether copper ground bars and terminals become loose or get corroded.	
Motor	◆ Check whether abnormal noise exists. ◆ Check whether abnormal oscillation exists. ◆ Check whether the connection between the motor and AC drive becomes loose. ◆ Check whether the motor fixing screws become loose.	
Cooling fan	◆ Check whether abnormal noise or vibration exists on the cooling fan of the AC drive. ◆ Check whether abnormal noise or vibration exists on the cooling fan of the motor.	
Load	◆ Check whether the motor parameters are set properly. ◆ Check whether the motor is overload. ◆ Check for mechanical vibration (< 1G under normal conditions).	
Voltage	◆ Check whether the main circuit voltage is within the permissible range. ◆ Check whether the control circuit voltage is normal. ◆ Check whether start of heavy load exists.	
Operating panel	◆ Check whether the operating panel display is clear. ◆ Check whether any character disappears.	
Main circuit	◆ Check whether any screw is loose.	
Filter capacitor	◆ Check whether liquid leakage, discoloring, cracking, or housing expansion occurs on the filter capacitor.	
Electromagnetic contactor	◆ Check whether the contactor is loose or abnormal noise exists during operation. ◆ Check whether short-circuit, water stain, expansion, or cracking occurs on external components.	

5.2 Periodic Inspection

Inspection Item	Inspection Details	Inspection Method and Troubleshooting	Inspection Period	Checked
Mechanical components	Check whether abnormal noise or vibration exists. Check whether fasteners such as screws are loose. Check whether deformation or damage occurs. Check whether discoloring occurs due to overheat. Check whether dust or defacement exists.	◆ Check by observing and hearing. ◆ Tighten fasteners. ◆ Replace the deformed or damaged component. ◆ Clean dust with a vacuum cleaner, and wipe surface dirt gently with a soft cloth immersed in neutral detergent.	Half a year	
Cables	Check whether discoloration exists on the cables and connections. Check the cable insulation layer for aging or wear.	◆ Replace cracked cables. ◆ Replace damaged terminals.	Half a year	
Air filter	Check whether the air filter and heatsink are clogged or stuck with any foreign material. Check whether the air inlet and outlet are clogged or stuck with any foreign matter.	◆ Clean the air filter and heatsink. ◆ Clean the air inlet and outlet.	Half a year	
Control circuit	Check whether control components are in poor contact. Check whether terminal screws are loose. Check whether control cable insulation is cracked.	◆ Clear away foreign matters on the surface of control cables and connection terminals. ◆ Replace damaged or corroded control cables.	Half a year	

5.3 Replacement of Wear Parts

5.3.1 Lifetime of Wear Parts

Wear parts of the AC drive include the cooling fan and electrolytic capacitor. Their lifetime is related to the operating environment and maintenance. The lifetime of the two components under general conditions is listed below.

Component	Lifetime [1]
Cooling fan	⩾ 5 years
Electrolytic capacitor	⩾ 5 years

NOTE

[1] The standard lifetime indicates the lifetime when the components are used in the following conditions. You can determine when to replace these components according to the actual operating time.

1) Ambient temperature: 40°C
2) Load rate: 80%
3) Operating rate: 24 hours per day

5.3.2 Number of Cooling Fans

Model	Number of Cooling Fans
CP700-2T7.5-H	2
CP700-2T11-H	1
CP700-2T15-H	1
CP700-2T18.5-H	1
CP700-2T22-H	1
CP700-2T30-H	2
CP700-2T37-H	2
CP700-2T45-H	2
CP700-4T5.5-H	1
CP700-4T7.5-H	1
CP700-4T11-H	2
CP700-4T15-H	2
CP700-4T18.5-H	1
CP700-4T22-H	1
CP700-4T30-H	1
CP700-4T37-H	1
CP700-4T55-H	2
CP700-4T75-H	2
CP700-4T90-H	2

5.3 Replacing Cooling Fans

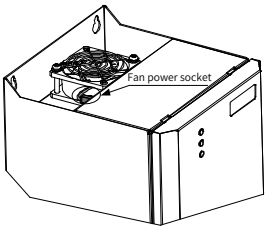
1) Possible damage causes: bearing worn and blade aging
2) Judging criteria: whether there is crack on the blade; whether there is abnormal vibration noise upon startup; whether the blade runs abnormally
3) Removal and installation:

■ Press the fan cover hook and pull the fan outward.

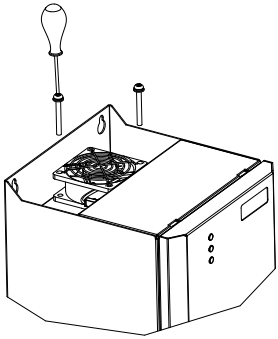
■ After replacement is completed, check that the air flow direction is upright.

Removing the Fan (CP700-4T5.5-H to CP700-4T7.5-H)

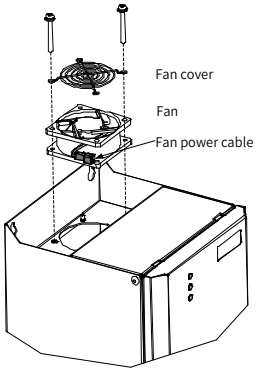
1) Disconnect the fan power cable. (Top view)



2) Remove the two screws from the fan cover using a screwdriver.

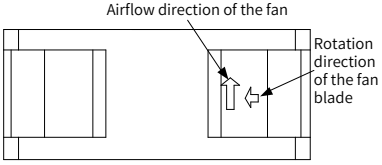


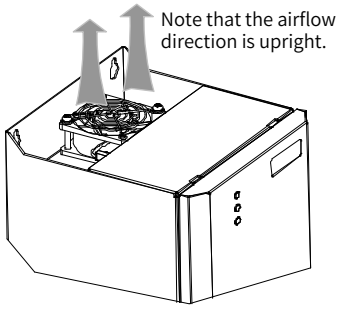
3) Remove the fan and fan cover from the AC drive.



Mounting the Fan (CP700-4T5.5-H to CP700-4T7.5-H)

1) Install the fan in a reverse procedure to removal.
2) Pay attention to the direction of the fan. Note that the airflow direction arrow (on the side of the fan) must be upright after the fan is installed.
3) Install the fan and fan cover on the AC drive. Align the mounting holes of the cooling fan, fan cover and the AC drive, as shown in figure 3 of the removal procedure.
4) After replacement is completed, check that the air flow direction is upright.



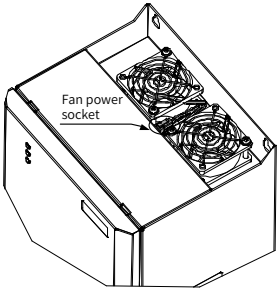


NOTE

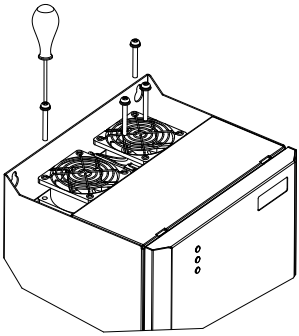
The fan removal and installation methods for models with only one cooling fan (CP700-2T11-H to CP700-2T22-H and CP700-4T18.5-H to CP700-4T37-H) are similar to those for models CP700-4T5.5-H to CP700-4T7.5-H. However, you need to remove four screws in step 2 of the removal procedure.

Removing the Fan (CP700-4T11-H to CP700-4T15-H)

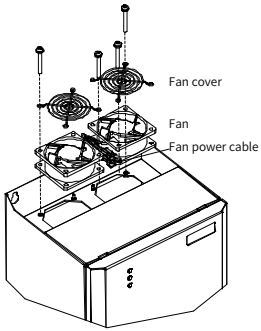
1) Disconnect the fan power cable. (Top view)



2) Remove the four screws from the fan cover using a screwdriver.

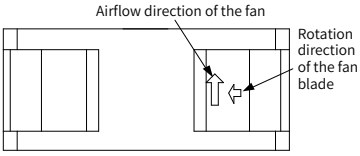


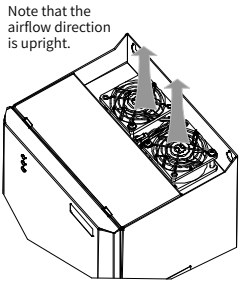
3) Remove the fan and fan cover from the AC drive.



Mounting the Fan (CP700-4T11-H to CP700-4T15-H)

1) Install the fan in a reverse procedure to removal.
2) Pay attention to the direction of the fan. Note that the airflow direction arrow (on the side of the fan) must be upright after the fan is installed.
3) Install the fan and fan cover on the AC drive. Align the mounting holes of the cooling fan, fan cover and the AC drive, as shown in figure 3 of the removal procedure.
4) After replacement is completed, check that the air flow direction is upright.





NOTE

The fan removal and installation methods for models with two cooling fans (CP700-2T7.5, CP700-2T30-H to CP700-2T45-H, and CP700-4T55-H to CP700-4T90-H) are similar to those for models CP700-4T11-H to CP700-4T15-H.

5.4 Storage

For storage of the AC drive, pay attention to the following three aspects:

1) Pack the AC drive with the original packing box provided by Inovance.
2) Do not expose the AC drive to moisture, high temperature, or outdoor direct sunlight for a long time.
3) The electrolytic capacitor will deteriorate after being stored for a long time. Therefore, the AC drive must be switched on once for at least 5 hours every 6 months. The input voltage must be increased slowly to the rated value by using a voltage regulator.

Appendix A Parameter Table

☆ : The parameter can be modified when the AC drive is in either stop or running state.

★ : The parameter cannot be modified when the AC drive is running.

● : The parameter is the actual measured value and cannot be modified.

*: The parameter is a factory parameter and can be set only by the manufacturer.

A.1 Standard Parameter Table

Param. No.	Param. Name	Setting Range	Default	Property
Group F0: Standard Parameters				
F0-00	G/P type display	1: G type (constant torque load)	1	●
F0-01	Motor 1 control mode	0: Sensorless vector control (SVC) 1: Reserved 2: V/F control	0	★
F0-02	Command source selection	0: External LCD panel/Commissioning software 1: Terminal I/O control 2: Communication control	0	★
F0-03	Main frequency reference X selection	0: Digital setting (initial value F0-08 can be modified by keypad or terminal UP/DOWN, non-retentive at power failure) 1: Digital setting (initial value F0-08 can be modified by keypad or terminal UP/Down, retentive at power failure) 2: AI1 3: AI2 4: (Reserved) 5: Pulse setting (DIO1) 6: Multi-reference 7: Simple PLC 8: PID 9: Communication setting 10: Synchronization control 11: Air compressor control	11	★

Param. No.	Param. Name	Setting Range	Default	Property
F0-04	Auxiliary frequency reference Y selection	0: Digital setting (initial value F0-08 can be modified by keypad or terminal UP/DOWN, non-retentive at power failure) 1: Digital setting (initial value F0-08 can be modified by keypad or terminal UP/Down, retentive at power failure) 2: AI1 3: AI2 4: (Reserved) 5: Pulse setting (DIO1) 6: Multi-reference 7: Simple PLC 8: PID 9: Communication setting 10: Synchronization control	0	★
F0-05	Base value of range of auxiliary frequency reference Y for main and auxiliary calculation	0: Relative to the maximum frequency 1: Relative to main frequency X	0	☆
F0-06	Range of auxiliary frequency source Y for main and auxiliary calculation	0% to 150%	100%	☆
F0-07	Final frequency reference setting selection	Ones (Frequency source selection) 0: Main frequency reference X 1: Main and auxiliary calculation result (based on the tens position) 2: Switchover between main frequency reference X and auxiliary frequency reference Y 3: Switchover between main frequency reference X and main and auxiliary calculation result 4: Switchover between auxiliary frequency reference Y and main and auxiliary calculation result Tens (X and Y superposition relationship) 0: Main + Auxiliary 1: Main - Auxiliary 2: Max. (main, auxiliary) 3: Min. (main, auxiliary) 4: Main x Auxiliary	0	☆
F0-08	Preset frequency	0.00 Hz to F0-10 (Maximum frequency)	50.00 Hz	☆
F0-09	Running direction	0: Run in the same direction 1: Run in the reverse direction	0	☆
F0-10	Maximum frequency	5.00 Hz to 600.00 Hz	155.00 Hz	★

Param. No.	Param. Name	Setting Range	Default	Property
F0-11	Setting channel of frequency reference upper limit	0: Set by F0-12 1: AI1 2: AI2 4: Pulse reference (DIO1) 5: Communication setting 6: Multi-reference	0	★
F0-12	Frequency reference upper limit	F0-14 (Frequency reference lower limit) to F0-10 (Maximum frequency)	155.00 Hz	☆
F0-13	Frequency reference upper limit offset	0.00 Hz to F0-10 (Maximum frequency)	0.00 Hz	☆
F0-14	Frequency reference lower limit	0.00 Hz to F0-12 (Frequency reference upper limit)	0.00 Hz	☆
F0-15	Carrier frequency	2.0 kHz to 8.0 kHz	4.0 kHz	☆
F0-16	Carrier frequency adjusted with load	0: Disabled 1: Enabled	1	☆
F0-17	Acceleration time 1	0.00s to 6500.0s	20.0s	☆
F0-18	Deceleration time 1	0.00s to 6500.0s	20.0s	☆
F0-19	Acceleration/ Deceleration time unit	0: 1s 1: 0.1s 2: 0.01s	1	★
F0-21	Frequency offset of auxiliary frequency setting channel for main and auxiliary calculation	0.00 Hz to F0-10 (Maximum frequency)	0.00 Hz	☆
F0-22	Frequency reference resolution	1: 0.1 Hz 2: 0.01 Hz	2	★
F0-23	Retentive of digital setting frequency upon stop	0: Disabled 1: Enabled	0	☆
F0-25	Acceleration/ Deceleration time base frequency	0: Maximum frequency (F0-10) 1: Frequency reference 2: 100 Hz	0	★
F0-26	Base frequency for UP/DOWN modification during running	0: Running frequency 1: Frequency reference	0	★

INOVANCE Warranty Agreement

1) Inovance provides an 18-month free warranty to the equipment itself from the date of manufacturing for the failure or damage under normal use conditions.
2) Within the warranty period, maintenance will be charged for the damage caused by the following reasons:
   a. Improper use or repair/modification without prior permission
   b. Fire, flood, abnormal voltage, natural disasters and secondary disasters
   c. Hardware damage caused by dropping or transportation after procurement
   d. Operations not following the user instructions
   e. Damage out of the equipment (for example, external device factors)
3) The maintenance fee is charged according to the latest Maintenance Price List of Inovance.
4) If there is any problem during the service, contact Inovance's agent or Inovance directly.
5) Inovance reserves the rights for explanation of this agreement.
